knowledge workers, life domain, work domain, perceived impact, forced work from home, smart work

A corrigendum on

[The medium-term perceived impact of work from home on life and work domains of knowledge workers during COVID-19 pandemic: a survey at the National Research Council of Italy](#)

by Bodini, A., Leo, C. G., Rissotto, A., Mincarone, P., Fusco, S., Garbarino, S., Guarino, R., Sabina, S., Scoditti, E., Tumolo, M. R., and Ponzini, G. (2023). *Front. Public Health* 11:1151009. doi: 10.3389/fpubh.2023.1151009

In the published article, there were a few errors in [Table 1](#) as published. The number of women was erroneously reported (the right number is 431 rather than 425). The percentage of subjects aged 60 or older was misreported (the right percentage is 13.1% instead of 11.9%). The data relating to “Married or living together, no children” have been exchanged with those relating to “Married or living together, with children”. The number of participants with a Bachelor’s degree or higher was misreported (the right number is 614 instead of 583). The corrected [Table 1](#) and its caption appear below.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.
