

This presentation by Andrea Tarallo <https://orcid.org/0000-0002-2749-8588> is composed of slides and material created by the GO FAIR Foundation (<https://www.gofair.foundation>) ROR: <https://ror.org/056j50v04>. All the material is distributed under a CC BY-SA licence.

# FIP: FAIR Implementation Profiles

## Che cosa è un FAIR Implementation Profile (FIP)?

Un FIP è una **RACCOLTA** di **scelte** (tecnologiche)  
fatte da una **comunità** di pratica per **soddisfare**  
ognuno dei principi e sottoprincipi **FAIR**

## Box 2 | The FAIR Guiding Principles

### To be Findable:

- F1. (meta)data are assigned a globally unique and persistent identifier
- F2. data are described with rich metadata (defined by R1 below)
- F3. metadata clearly and explicitly include the identifier of the data it describes
- F4. (meta)data are registered or indexed in a searchable resource

### To be Accessible:

- A1. (meta)data are retrievable by their identifier using a standardized communications protocol
  - A1.1 the protocol is open, free, and universally implementable
  - A1.2 the protocol allows for an authentication and authorization procedure, where necessary
- A2. metadata are accessible, even when the data are no longer available

### To be Interoperable:

- I1. (meta)data use a formal, accessible, shared, and broadly applicable language for knowledge representation.
- I2. (meta)data use vocabularies that follow FAIR principles
- I3. (meta)data include qualified references to other (meta)data

### To be Reusable:

- R1. meta(data) are richly described with a plurality of accurate and relevant attributes
  - R1.1. (meta)data are released with a clear and accessible data usage license
  - R1.2. (meta)data are associated with detailed provenance
  - R1.3. (meta)data meet domain-relevant community standards

- Nessuna soluzione di implementazione
- Non è possibile pianificare una strategia
- Nessuna possibilità di stimare costi

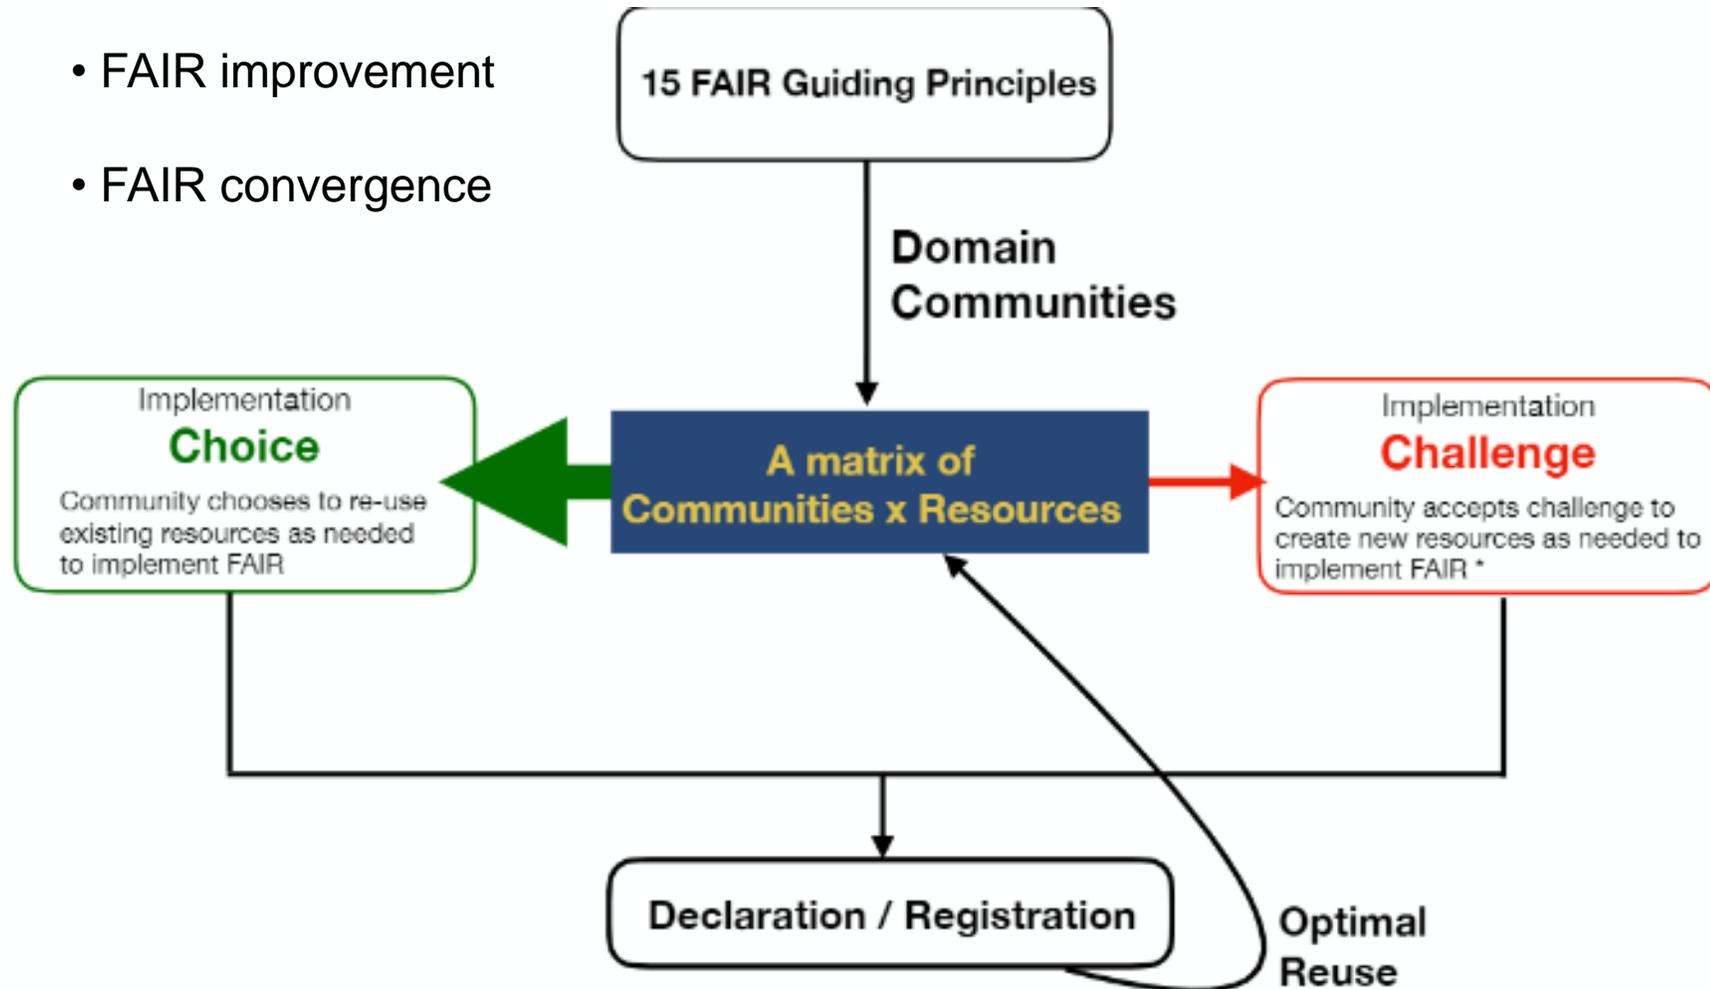

Wilkinson et al. 2016

# Dai FAIR Implementation Matrix ai FIP

Un approccio sistematico al:

- FAIR assessment
- FAIR improvement
- FAIR convergence

...every „choice“ was once a „challenge“

# The FIP approach

Responses reflect technical community choices how to implement the FAIR Principles

In a FIP, these solutions are called **FAIR Enabling Resources (FERs)**

FIP	
F1	FAIR Enabling Resource (FER)
F2	FAIR Enabling Resource (FER)
F3	FAIR Enabling Resource (FER)
F4	FAIR Enabling Resource (FER)
A1	FAIR Enabling Resource (FER)
A1.1	FAIR Enabling Resource (FER)
A1.2	FAIR Enabling Resource (FER)
A2	FAIR Enabling Resource (FER)
I1	FAIR Enabling Resource (FER)
I2	FAIR Enabling Resource (FER)
I3	FAIR Enabling Resource (FER)
R1	FAIR Enabling Resource (FER)
R1.1	FAIR Enabling Resource (FER)
R1.2	FAIR Enabling Resource (FER)
R1.3	FAIR Enabling Resource (FER)

# What...

- A list of declared technology **choices** intended to implement each of the FAIR Principles
- Decided collectively by the members of a particular **community** of practice

## *FAIR Implementation Community*

- *FAIR Enabling Resource*

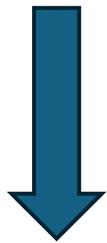

# How... a rigorous approach to FAIR implementation

FAIR principle	FIP Question	FAIR Enabling Resource type	Your answers
F1	What globally unique, persistent, resolvable identifiers do you use for metadata records?	Identifier service	
F1	What globally unique, persistent, resolvable identifiers do you use for datasets?	Identifier service	
F2	Which metadata schemas do you use for findability?	Metadata schema	
F3	What is the technology that links the persistent identifiers of your data to the metadata description?	Metadata-Data linking schema	
F4	In which search engines are your metadata records indexed?	Registry	
F4	In which search engines are your datasets indexed?	Registry	
A1.1	Which standardized communication protocol do you use for metadata records?	Communication protocol	
A1.1	Which standardized communication protocol do you use for datasets?	Communication protocol	
A1.2	Which authentication & authorisation technique do you use for metadata records?	Authentication & authorisation service	
A1.2	Which authentication & authorisation technique do you use for datasets?	Authentication & authorisation service	
A2	Which metadata longevity plan do you use?	Metadata longevity	
I1	Which knowledge representation languages (allowing machine interoperation) do you use for metadata records?	Knowledge representation language	
I1	Which knowledge representation languages (allowing machine interoperation) do you use for datasets?	Knowledge representation language	
I2	Which structured vocabularies do you use to annotate your metadata records?	Structured vocabularies	
I2	Which structured vocabularies do you use to encode your datasets?	Structured vocabularies	
I3	Which models, schema(s) do you use for your metadata records?	Metadata schema	
I3	Which models, schema(s) do you use for your datasets?	Data schema	
R1.1	Which usage license do you use for your metadata records?	Data usage license	
R1.1	Which usage license do you use for your datasets?	Data usage license	
R1.2	Which metadata schemas do you use for describing the provenance of your metadata records?	Provenance model	
R1.2	Which metadata schemas do you use for describing the provenance of your datasets?	Provenance model	
R1.3	Who is the community, and what are their domain-relevant community standards?	The FAIR implementation Profile	<i>This FAIR implementation Profile</i>

Schultes, E., Magagna, B., & Schultes, J. (2023). FIP mini-questionnaire (2.0.0). Zenodo.  
<https://doi.org/10.5281/zenodo.10417536>

# Dal questionario excel alla machine actionability: humans VS machines

**III.6 Declaration F4 Datasets: Which service do you use to publish your datasets?**

Principle F4 states that digital resources must be registered or indexed in a searchable resource (e.g., a search engine). The searchable resource provides the infrastructure by which a metadata record (made accessible with a GUPRI, F1) can be discovered, using either the attributes in that metadata (F2) or via the identifier of the resource itself (F3) [T. Weigel , U. Schwardmann , J. Klump , S. Bendoukha & R. Quick . Making data and workflows findable for machines. Data Intelligence 2(2020), 40–46. 10.1162/dint\_a\_00026].

To summarize, this question requests a FAIR Enabling Resource of type "registry" which is a service that indexes metadata and data and provides search over that index.

Desirable: *Defining FAIR Implementation Profile*

a. Declaration: No implementation choice has been made by this community

b. Declaration: FAIR Enabling Resource(s)

Clear answer

Answered 5 months ago by Andrea Tarallo.

---

**III.6.b.1 List the FAIR Enabling Resource(s)**

Desirable: *Defining FAIR Implementation Profile*

**III.6.b.1.a.1 Select the FAIR Enabling Resource**

Desirable: *Defining FAIR Implementation Profile*

**LifeWatchITAdatPortal | LifeWatch Italy Data Portal**  
The LifeWatch Italy Data Portal is a national data infrastructure facilitating data sharing for biological and environmental research and making it accessible and reusable.
